

2014 Latest Oracle 1Z0-062 Exam Demo Free Download!

QUESTION 1 Examine the parameters for your database instance: NAME_TYPE VALUE -----
----- undo_management string AUTO undo_retention integer 12 00 undo_tablespace
string UNDOTBS1 You execute the following command: SQL> ALTER TABLESPACE undotbs1 RETENTION
NOGUARANTEE; Which statement is true in this scenario? A. Undo data is written to flashback logs after 1200 seconds. B.
Inactive undo data is retained for 1200 seconds even if subsequent transactions fail due to lack of space in the undo tablespace. C.
You can perform a Flashback Database operation only within the duration of 1200 seconds. D. An attempt is made to keep inactive
undo for 1200 seconds but transactions may overwrite the undo before that time has elapsed. Answer: A QUESTION 2 A user
establishes a connection to a database instance by using an Oracle Net connection. You want to ensure the following: 1. The user
account must be locked after five unsuccessful login attempts. 2. Data read per session must be limited for the user. 3. The user
cannot have more than three simultaneous sessions. 4. The user must have a maximum of 10 minutes session idle time before being
logged off automatically. How would you accomplish this? A. by granting a secure application role to the user B. by
implementing Database Resource Manager C. by using Oracle Label Security options D. by assigning a profile to the user
Answer: D QUESTION 3 As a user of the ORCL database, you establish a database link to the remote HQ database such that all
users in the ORCL database may access tables only from the SCOTT schema in the HQ database. SCOTT's password is TIGER. The
service name "HQ" is used to connect to the remote HQ database. Which command would you execute to create the database link?
A. CREATE DATABASE LINK HQ USING 'HQ'; B. CREATE DATABASE LINK HQ CONNECT TO CXCURRENT_USER
USING HQ'S C. CREATE PUBLIC DATABASE LINK HQ CONNECT TO scott IDENTIFIED BY tiger USING 'HQ'; D.
CREATE DATABASE LINK HQ CONNECT TO scott IDENTIFIED BY tiger USING 'HQ'; Answer: B QUESTION 4 What
happens if a maintenance window closes before a job that collects optimizer statistics completes? A. The job is terminated and the
gathered statistics are not saved. B. The job is terminated but the gathered statistics are not published. C. The job continues to
run until all statistics are gathered. D. The job is terminated and statistics for the remaining objects are collected the next time the
maintenance window opens. Answer: D QUESTION 5 You plan to create a database by using the Database Configuration Assistant
(DBCA), with the following specifications: - Applications will connect to the database via a middle tier. - The number of concurrent
user connections will be high. - The database will have mixed workload, with the execution of complex BI queries scheduled at
night. Which DBCA option must you choose to create the database? A. a General Purpose database template with default memory
allocation B. a Data Warehouse database template, with the dedicated server mode option and AMM enabled C. a General
Purpose database template, with the shared server mode option and Automatic Memory Management (AMM) enabled D. a default
database configuration Answer: C QUESTION 6 Which two statements are true about the logical storage structure of an Oracle
database? A. An extent contains data blocks that are always physically contiguous on disk. B. An extent can span multiple
segments. C. Each data block always corresponds to one operating system block. D. It is possible to have tablespaces of different
block sizes. E. A data block is the smallest unit of I/O in data files. Answer: BD QUESTION 7 Which two statements correctly
describe the relationship between data files and logical database structures? A. A segment cannot span data files. B. A data file
can belong to only one tablespace. C. An extent cannot span data files. D. The size of an Oracle data block in a data file should
be the same as the size of an OS block. Answer: BC QUESTION 8 Which statement is true about the Log Writer process? A. It
writes when it receives a signal from the checkpoint process (CKPT). B. It writes concurrently to all members of multiplexed redo
log groups. C. It writes after the Database Writer process writes dirty buffers to disk. D. It writes when a user commits a
transaction. Answer: D QUESTION 9 The ORCL database is configured to support shared server mode. You want to ensure that a
user connecting remotely to the database instance has a one-to-one ratio between client and server processes. Which connection
method guarantees that this requirement is met? A. connecting by using an external naming method B. connecting by using the
easy connect method C. creating a service in the database by using the dbms_service.create_service procedure and using this
service for creating a local naming service" D. connecting by using the local naming method with the server = dedicated parameter
set in the tnsnames.ora file for the net service E. connecting by using a directory naming method Answer: CE QUESTION 10
Which two tasks can be performed on an external table? A. partitioning the table B. creating an invisible index C. updating the
table by using an update statement D. creating a public synonym E. creating a view Answer: CD QUESTION 11 Which three
statements are true about a job chain? A. It can contain a nested chain of jobs. B. It can be used to implement dependency-based
scheduling. C. It cannot invoke the same program or nested chain in multiple steps in the chain. D. It cannot have more than one
dependency. E. It can be executed using event-based or time-based schedules. Answer: ABE QUESTION 12 The hr user receives,
the following error while inserting data into the sales table: ERROR at line 1: ORA-01653; unable to extend table HR.SALES by

128 in tablespace USERS On investigation, you find that the users tablespace uses Automatic Segment Space Management (ASSM). It is the default tablespace for the HR user with an unlimited quota on it. Which two methods would you use to resolve this error? A.

- A. Altering the data life associated with the USERS tablespace to extend automatically
- B. Adding a data life to the USERS tablespace
- C. Changing segment space management for the USERS tablespace to manual
- D. Creating a new tablespace with autoextend enabled and changing the default tablespace of the HR user to the new tablespace
- E. Enabling resumable space allocation by setting the RESUMABLE_TIMEOUT parameter to a nonzero value

Answer: AD QUESTION 13 Which three factors influence the optimizer's choice of an execution plan? A.

- A. the optimizer_mode initialization parameter
- B. operating system (OS) statistics
- C. cardinality estimates
- D. object statistics in the data dictionary
- E. fixed baselines

Answer: AB QUESTION 14 Examine the resources consumed by a database instance whose current Resource Manager plan is displayed. SQL> SELECT name,

active_sessions, queue_length, Consumed_cpu_time, cpu_waits, cpu_wait_time FROM v\$src_consumer_group;

NAME ACTIVE_SESSIONS QUEUE_LENGTH CONSUMED_CPU_WAITS CPU_WAIT_TIME -----

----- OLTP__ORDER__ENTRY1029690 467 OTHES__GROUPS 0
059823664089 60425 SYS_GROUP 1 02420704 914 19540 DS.S_QUERIES4245946603004 55700

Which two statements are true? A.

- A. An attempt to start a new session by a user belonging to DSS_QUERIES fails with an error.
- B. An attempt to start a new session by a user belonging to OTHE_GROUPS fails with an error.
- C. The CPU_WAIT_TIME column indicates the total time that sessions in the consumer group waited for the CPU due to resource management.
- D. The CPU_WAIT_TIME column indicates the total time that sessions in the consumer group waited for the CPU due to I/O waits and latch or enqueue contention.
- E. A user belonging to the DSS_QUERIES resource consumer group can create a new session but the session will be queued.

Answer: CE QUESTION 15 Which action takes place when a file checkpoint occurs? A.

- A. The checkpoint position is advanced in the checkpoint queue.
- B. All buffers for a checkpointed file that were modified before a specific SCN are written to disk by DBWn and the SCN is stored in the control file.
- C. The Database Writer process (DBWn) writes all dirty buffers in the buffer cache to data files.
- D. The Log Writer process (LGWR) writes all redo entries in the log buffer to online redo log files.

Answer: C Passing your Oracle 1Z0-062 Exam by using the latest Oracle 1Z0-062 Exam Demo Full Version:
