[2017 New 70-697 Exam Questions & Answers: <https://1drv.ms/f/s!AvI7wzKf6QBjgWwvXbmSYJJeuqGh> QUESTION 152 Drag and Drop Question You administer Windows 10 Enterprise tablets and virtual desktop computers that are joined to an Active Directory domain. Your company provides virtual desktop computers to all users. Employees in the sales department also use tablets, sometimes connected to the company network and sometimes disconnected from the company network. You want sales department employees to have the same personal data, whether they are using their virtual desktop or their tablets. You need to configure the network environment to meet the requirements. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. More than one order to answer choices may be correct. You will receive credit for any of the correct orders you select.

Actions	Answer Area
Enable slow-link mode for the tablets.	
Create a network share.	
Configure offline files for the tablets.	
Disable offline files on the network share.	
Configure folder redirection for the employees' domain accounts to the network share.	
Specify the file share for which you want to enable Always Offline mode and set the value to 1.	
Set the primary computer for all employees from the sales department.	

Answer:

Actions	Answer Area
	Create a network share.
Configure offline files for the tablets.	
Disable offline files on the network share.	
Configure folder redirection for the employees' domain accounts to the network share.	
Set the primary computer for all employees from the sales department.

The laptop does not have a Trusted Platform Module (TPM) chip. You plan to enable BitLocker Drive Encryption (BitLocker) for the operating system drive. What are two methods that you can use to unlock the drive when the laptop restarts? Each correct answer presents a complete solution. A. a password B. a Near Field Communication (NFC)-enabled portable device C. a USB drive D. a user account E. Network Unlock Answer: CE Explanation:

<http://www.howtogeek.com/howto/6229/how-to-use-bitlocker-on-drives-without-tpm/> QUESTION 154 You administer Windows 10 Enterprise client computers that are members of an Active Directory domain that includes Active Directory Certificate Services (AD CS). You restored a computer from a backup that was taken 45 days ago. Users are no longer able to log on to that computer by using their domain accounts. An error message states that the trust relationship between the computer and the primary domain has failed. What should you do? A. Renew the certificates issued to the client computer. B. Reset the passwords of all affected domain users. C. Log on as a local administrator and issue the netdom resetpwd command. Log off and restart the computer. D. Restore the client computer from a known good backup that was taken two weeks earlier than the backup you previously restored. Answer: C

Explanation: <http://theitbros.com/fix-trust-relationship-failed-without-domain-rejoining/> QUESTION 155 Drag and Drop Question You have a computer named Client1 that runs Windows 10 Enterprise. Client1 is a member of an Active Directory domain. A domain administrator provisions a certificate template for a virtual smart card logon. In the BIOS of Client1, you enable the Trusted Platform Module (TPM). You need to enable the virtual smartcard logon on Client1. Which three actions should you perform in

sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
