QUESTION 167 You configure a service profile template from the Cisco UCS Manager GUI by using the Create Local Disk Configuration Policy option. The No RAID local disk policy mode is selected and the Protect Configuration property is disabled. You create a service profile that is created from the service profile template. You apply the service profile to a server that has an operating system installed on a RAID-10 volume. Which statement about the server after it is associated to the service profile is true?
A. The server has RAID-0 configured on the local disk.
B. The server has RAID-1 configured on the local disk.
C. The server has the local storage detached.
D. The local disk of the server remains RAID-10.
Answer: C
QUESTION 168 Which two statements about the maintenance policy configurations available from the Cisco UCS Manager GUI are true? (Choose two.)
A. A maintenance policy can be defined for the service profile associated to a server and for updating a service profile bound to one or more service profiles.
B. A maintenance policy is used to configure a nondisruptive upgrade of the Cisco UCS Fabric Interconnects.
C. A maintenance policy can defer the direct deployment of firmware images for components that use neither the host firmware nor the management firmware packages available in the Cisco UCS Manager, such as fabric interconnects and IOMs.
D. A maintenance policy can deploy service profile changes immediately, when acknowledged by an admin user or automatically at the time specified in the schedule.
E. A maintenance policy can be used only to apply nondisruptive service profile changes to servers.
